Bahrain Bridge Construction Project

Overview

$4 Billion Qatar–Bahrain Friendship Bridge Project The Qatar–Bahrain Friendship Bridge project is progressing again following renewed bilateral coordinatio.

Key Takeaways

Bahrain has developed significant bridge infrastructure, including the King Fahd Causeway and Manama North Causeway, supported by advanced construction methods and specialized local and regional companies.

Major Bridges

King Fahd Causeway is a 25 km series of bridges and causeways connecting Bahrain to Saudi Arabia. It rests on 536 concrete pylons and includes seven embankments, with Middle Island (Passport Island) serving as a customs and immigration hub. Opened in 1986, it was the first bridge linking an island nation to a nearby continent, enhancing regional connectivity and trade.

Manama North Causeway Bridge is a 1. 4 km viaduct linking Manama with the Bahrain Bay financial district. It was constructed using the precast segmented method, which allows for efficient assembly of large bridge sections while maintaining structural integrity.

Construction MethodsBahrain's bridge projects often employ precast concrete segments, post-tensioning, and advanced steel fabrication techniques. These methods ensure durability, speed of construction, and the ability to handle complex urban and marine environments.
