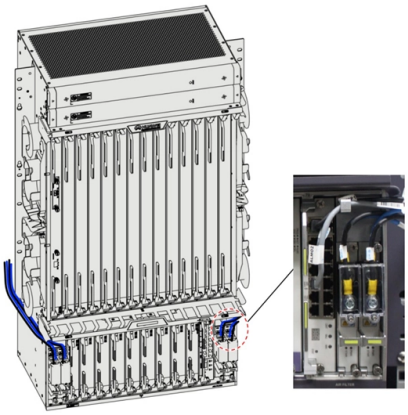
Price of 8-figure optical cable G 657A2



Overview

G657A2 at $25/km: Navigating the Price Storm in the This article analyzes why prices for g 657a2 fiber have shattered records, provides a data-backed forec.

Key Takeaways

As of early 2026, the market price for G. 657A2 optical fiber is approximately US$22 per kilometer, reflecting a significant surge due to high demand and supply constraints.

Current Pricing and Market Trends

The G. 657A2 fiber, a bend-insensitive single-mode optical cable, is currently priced around US$22/km as of February 2026, up sharply from mid-2025 levels. This price increase is driven by several factors: AI Data Center Demand: Hyperscale AI clusters require tens of thousands of fiber kilometers for internal connectivity, significantly increasing demand.

Drone and Military Applications: Modern drones consume 20–40 km of G. 657A2 fiber per unit, adding unexpected demand pressures. Supply Constraints: Fiber production relies on preforms, which take 18–24 months to expand capacity, limiting the ability to meet surging demand.

Global Market Shifts: Geopolitical factors and AI infrastructure expansion have intensified competition for available supply. Technical ConsiderationsG. 657A2 fibers are designed for extremely tight bend radii and dense installation environments, making them ideal for space-constrained patching and high-density cabling.

They are fully compatible with G. 652. D fibers, allowing integration into existing networks.

Compared to G. 657. A1, A2 fibers offer maximum flexibility for challenging installations, while A1 is suitable for moderate bending scenarios.

Procurement Implications

Lead Times: Expect longer lead times and limited stock availability due to the structural supply shortage. Budgeting: Procurement teams should account for higher baseline pricing and shorter quotation validity, often just 1–3 days. Strategic Ordering: Phased orders and framework agreements are recommended to mitigate risk and secure supply.

Summary

The tariff cost for G. 657A2 optical fiber is currently around US$22/km, reflecting a market under pressure from AI, FTTH, and specialized applications. Buyers should plan for tight supply, rapid price changes, and strategic procurement to ensure availability for critical installations.
