Alz distribution box dimensions

Overview

This document provides specifications for various distribution boxes including dimensions, mounting sizes, and number of ways.

Key Takeaways

ALZ distribution boxes typically follow standard dimensions with illustrative tolerances of ±10%, constructed for IP-55 protection and designed to accommodate MCCBs and bus bars. General Dimensions and ConstructionALZ distribution boxes are generally fabricated from 2 mm GI sheet steel with reinforced bodies and slanted roofs for water runoff. The dimensions are illustrative, with tolerances of ±10% over the specified size, allowing flexibility for different capacities and configurations ( ).

Standard boxes are designed to house one bus bar arrangement with 4-pole MCCBs and outgoing feeder arrangements with 2 sets of 3-pole MCCBs, with adequate internal clearance for safe operation ( ).

Mounting and Layout

Earthing points: Two solid earthing points on either side of the box. Cable entry: Heavy-duty, double compression cable glands at the bottom for incoming and outgoing cables. Internal barriers: Metallic or heat-resistant insulating barriers between MCCBs to prevent heat transfer during faults.

Lighting provision: Some boxes include internal lighting arrangements. Locking: Godrej-type 3-position locking system with optional manual locking galvanized to prevent rust ( ). Protection and ComplianceIP Rating: IP-55, ensuring protection against dust and water jets.

Standards: Conforms to IS-13947 (part 2) / 1993 for MCCB installation and electrical safety. Testing: Type-test certificates from CPRI or government-approved laboratories are required for compliance ( ). Notes on DimensionsWhile exact length, width, and height for ALZ boxes are not universally published, the illustrative dimensions provided in technical specifications serve as a reference for procurement and installation.

Users should confirm the specific model and number of ways (1-way to 36-ways) to determine precise measurements ( ). In practice, when planning installation or ordering, it is recommended to specify internal vs external dimensions and account for the ±10% tolerance to ensure proper fit and compliance with electrical safety standards.
