Approximately how tall is the distribution box

Overview

Install a distribution box at 4.5 to 5.5 feet high for safety, accessibility, and compliance. This height ensures easy use and protection from hazards.

Key Takeaways

The height of a distribution box varies by type, typically ranging from 15-1/2 inches to 28 inches.

Electrical Distribution Boxes

Electrical distribution boxes, also known as distribution panels or boards, are cabinets that house circuit breakers, fuses, and busbars to manage electricity distribution within a building. Their height is not standardized and depends on the number of circuits and the design of the enclosure.

Compact MC

B distribution boxes for residential or commercial use are generally smaller, often under 24 inches tall, while larger industrial panels can be taller to accommodate more components.

Wastewater or Irrigation Distribution Boxes

For wastewater or irrigation systems, distribution boxes are designed to channel water evenly to multiple outlets. For example: The Tuf-Tite 4-Hole distribution box has a height of 15-1/2 inches with an 11" x 11" lid and a 2" drop between inlet and outlets. The American Manufacturing wetland distribution box is 28 inches tall, with a 14" riser for at-grade access and adjustable water level fittings.

These boxes are typically made of high-density polyethylene and may include risers, anti-flotation collars, and secure lids for safety and inspection purposes.

Key Considerations

Type and application: Electrical boxes are sized for circuits, while water distribution boxes are sized for flow and inspection access. Installation requirements: Some boxes include risers or adjustable features that affect total height. Material and manufacturer: Heights can vary slightly depending on design and brand specifications.

In summary, the height of a distribution box depends on its purpose and design, ranging from around 15-1/2 inches for small irrigation boxes to 28 inches for larger wetland or inspection boxes, with electrical panels varying widely based on capacity and configuration.
