Cable tray material types and prices

Overview

Ultimate Guide to Cable Tray Selection – Types, Learn how to choose the best cable tray system for your needs. Explore types, materials, installation tips.

Key Takeaways

Cable trays are available in galvanized steel, stainless steel, aluminum, and plastic, with prices ranging from $0. 80 to $25 per meter depending on material, type, and finish.

Common Cable Tray Materials

Galvanized Steel

Most widely used due to durability and cost-effectiveness. Suitable for indoor and moderately corrosive environments. Price: approximately $2 to $10 per meter, depending on tray type and coating (HDG, powder-coated, or pre-galvanized).

Stainless Steel (SS 304/316)Highly resistant to corrosion, ideal for harsh or outdoor environments. More expensive than steel. Price: typically $10 to $25 per meter.

Aluminum

Lightweight, rust-proof, and easier to install. Mid-range cost, suitable for areas requiring reduced structural load. Price: around $5 to $15 per meter.

Plastic / PVCBudget-friendly and corrosion-resistant. Not suitable for heavy cable loads or high-temperature areas. Price: generally $0.

80 to $5 per meter.

Cable Tray Types and Pricing Considerations

Ladder Trays: Strong, support heavy cables, higher cost. Perforated Trays: Moderate strength, allow ventilation, slightly cheaper. Wire Mesh Trays: Lightweight, ideal for data or low-load cables, most economical.

Solid Bottom Trays: Protect cables from dust and debris, moderate cost. Pricing is influenced by tray width, depth, length, coating, and load capacity. Standard lengths are often 2.

4 meters per section for ladder trays. Bulk orders can significantly reduce per-unit costs, especially in B2B markets where prices can range from $0. 80 to over $76 per unit depending on material and size.

Additional Cost Factors

Coatings: Hot-dip galvanizing (HDG) increases durability but costs more; powder coating adds protection and color options. Labor and Installation: Skilled labor, welding, and mounting hardware add to total cost. Shipping: Heavier trays like steel increase transport costs.

Accessories: Fittings, covers, and support systems are priced per piece and can affect overall budget.

Summary

For most projects: Indoor standard applications: Galvanized steel ladder or perforated trays are cost-effective. Outdoor or corrosive environments: Stainless steel or aluminum is recommended. Lightweight or data cabling: Wire mesh or plastic trays offer savings and flexibility.

Understanding material, type, and installation requirements allows for optimized budgeting and long-term durability in cable management systems.
