Cable tray sealing package

Overview

FIRSTO firestops are designed to seal multi-cable and cable tray penetrations of fire-rated walls and floors.

Key Takeaways

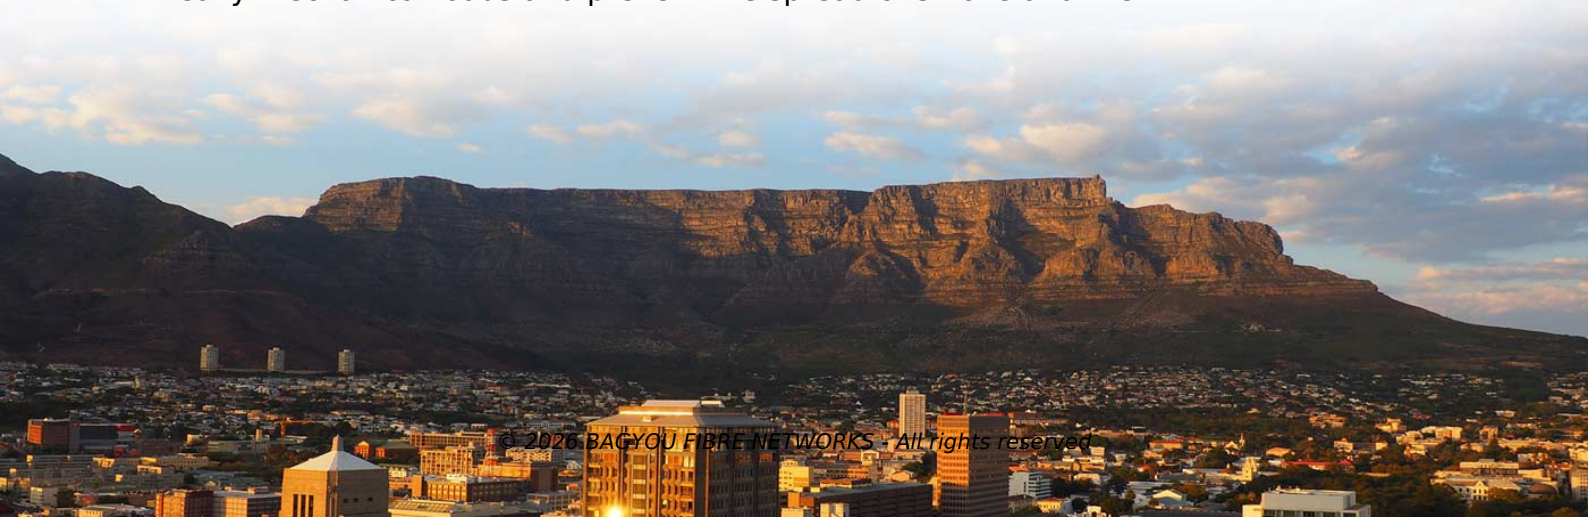

Cable tray sealing systems provide modular, fire-, water-, and gas-resistant protection for cable penetrations, ensuring safety, adaptability, and ease of maintenance.

Overview

Cable tray sealing systems are designed to protect cable installations as they pass through walls, floors, bulkheads, or decks. They prevent the spread of fire, smoke, water, and gas, while also providing mechanical stability for cables. These systems are essential in industrial, commercial, and offshore applications where safety and compliance with fire and safety standards are critical.

Types of Sealing Systems

Modular Firestop Systems Systems like FIRSTO are modular and easy to assemble around cable runs. They are suitable for fire-rated walls and floors, allowing cables to be added or removed without compromising the seal. These systems can withstand heavy mechanical loads and prevent the spread of smoke and fire.

Multi-

Cable Transit (MCT) Systems Hilti and similar providers offer MCT systems that use standardized rubber blocks (cable modules) arranged within a rigid transit frame. A wedge module compresses the blocks to secure cables in place. These systems are adaptable, ATEX-approved, and can provide electromagnetic shielding or blast resistance if required.

Flexible Modular Seals Roxtec's Multidiameter™ technology uses removable rubber layers in modular blocks to accommodate cables of varying diameters. This ensures a perfect seal regardless of cable size and provides certified protection against fire, gas, and water.

Key Features

Modularity: Allows easy installation, maintenance, and future cable modifications. Fire Resistance: Certified to prevent fire and smoke spread through penetrations. Water and Gas Tightness: Protects sensitive equipment and infrastructure from environmental hazards.

Mechanical Load Support: Can withstand the weight and movement of multiple cables. Adaptability: Accommodates different cable sizes and configurations, often without custom fabrication. Compliance: Meets international standards for fire safety, industrial safety, and sometimes ATEX requirements.

Applications

Cable tray sealing systems are widely used in: Industrial plants and factoriesOffshore and onshore energy projectsCommercial buildings with fire-rated walls and floorsData centers and critical infrastructure requiring environmental protectionInstallation and MaintenanceInstallation typically involves placing the modular blocks or firestop components around the cables within a transit frame or penetration opening. A wedge or compression mechanism secures the modules. Future modifications, such as adding or removing cables, are straightforward, requiring only loosening and adjusting the modules.

Conclusion

Cable tray sealing systems are essential for safety, compliance, and operational flexibility. Modular designs like FIRSTO, Hilti MCT, and Roxtec Multidiameter™ provide reliable protection against fire, smoke, water, and gas while allowing easy maintenance and adaptability for multiple cable sizes and configurations.
