Cable trays on the company roof

Overview

Cable trays and cable tray supports provide an organized, easily accessible management solution for rooftop cable networks that can be adjusted to any height or width, routed around walkways and equipment, and configured for proper ventilation. Cable tray support systems are structures designed to uphold electrical cable runs on flat or sloped roofs. Traditionally, facilities have chosen to bundle cables and rig them up in a way that offers little protection, or run cables through a tube-like electrical conduit system, which make it. Rooftop cable tray carries the electrical and data backbone of a building, and how it is supported decides whether that backbone stays organized, code-compliant, and off a roof it could otherwise damage. Drilling through the membrane creates potential leak points and can jeopardize roof warranty. Cable ladders mounted on cable blocks with C-channels on a roof surface. For demanding requirements, rely on PohlCon's many years of expertise. Layout isolation pads, (provided by contractor), according to the design and layout. Insert legs of duct support into bases and attach with. As buildings contain more and more devices and systems requiring structured cabling, the need for sturdy cable tray supports is growing. What can we offer?

Technical designs, advice and. RoofSupport, as a wire mesh cable tray system, provides a complete solution for organising cabling.
