Can an AC switch be directly connected to a fiber optic cable

Overview

The short answer is no - RJ45 connectors are designed for electrical Ethernet signals, while fiber optics transmit light pulses through glass or plastic. However, modern networks often combine both technologies. The choice between SFP and SFP+ depends on the network speed requirements, with SFP+ supporting higher speeds (up to 10 Gbps). A practical B2B guide explaining what a fiber optic switch is, how to connect fiber optic cable to Ethernet switches, how to connect two switches with fiber, how to disconnect fiber safely, and how to select suitable fiber modules, patch cords, media converters and switch solutions. As they do not emit electromagnetic signals, they're difficult to tap and secure against eavesdropping. I would also like to know what precautions should be taken during cable terminations.
