

Conductive paste for distribution boxes

Overview

This electrically conductive paste reduces contact resistance, repels moisture, inhibits corrosion, and prevents static buildup. It is thixotropic, and can be used as a gap filler to ensure grounded connections or revitalize corroded sockets. It is widely used in substations and power distribution stations, on the contact surface between the busbar and the busbar, between the busbar and the equipment terminal. Our conductor pastes are the invisible heroes behind the seamless flow of electronic connections. With unparalleled conductivity and unwavering reliability, our innovative pastes pave the way for cutting-edge circuitry solutions. Each option balances. Check each product page for other buying options. It will not separate, bleed or migrate.
