Construction Plan for Optical Cable Ducts

Overview

A practical, engineer-friendly guide to planning, installing, testing, and maintaining modern fiber optic networks for FTTH, FTTR, smart buildings, and data centers in 2026. A2 fiber and micro-duct blowing for future-proof FTTH / FTTR and campus builds. Optical cable is usually placed in a 25 to 40 mm inside diameter (ID) sub-duct which is placed into an existing larger diameter communications conduit. Most communications conduits can be fitted with three or four sub-ducts. Sub-ducts are often referred to as innerducts. Plan around standards: TIA-568. This document discusses techniques for trenching and laying optical fiber ducts. It also discusses using additional protective pipes like RCC or GI pipes over the HDPE ducts in. Corning Optical Communications cable specification sheets are available which list the maximum tensile load for various cable types.
