# Core Switch Telnet

## Overview

To connect with Telnet or SSH, you need to know the hostname or IP address of the switch. Note If no password has been configured, press Return. Exits the session. This guide includes detailed information on the switch software, including how to operate and use the management functions of the switch. To deploy this switch effectively and ensure trouble-free operation, you should first read the relevant sections in this guide so that you are familiar with all. The Cisco Business Managed Switches can be remotely accessed and configured through the Command Line Interface (CLI). Accessing the CLI allows commands to be entered in a terminal-based window. If you prefer to configure using terminal commands on your switch through the CLI rather than the. GitHub - Nanox-lan/core-switch-monitoring-tool: runs cmd prompt to access telnets of core switch and other switches, providing screenshot from command sh int status. runs. They are the widely used local switch console port login, the remote login by Telnet, and HTTP login through a web browser which serves as the graphic alternative to the former method with command-line.
