Distribution box for Sierra Leone

Overview

Sierra Leone power strips and PDU power distribution units for surface mount, rack mount and general purpose applications.

Key Takeaways

Distribution boxes in Sierra Leone are procured and managed primarily by the Electricity Distribution and Supply Authority (EDSA), with tenders and framework contracts available for qualified suppliers.

Overview of Electricity Distribution

The Electricity Distribution and Supply Authority (EDSA) is responsible for the supply, distribution, and retail sale of electricity across Sierra Leone, except in areas licensed to other entities.

EDS

A oversees the dispatch and system control of electricity and ensures safe, reliable, and affordable service for residential, commercial, and industrial consumers. Distribution boxes are a key component of the electricity network, facilitating the safe delivery of electricity from substations to end users. Procurement and TendersEDSA has allocated funds in its 2026 budget for the procurement of Distribution Network Materials, including distribution boxes.

Suppliers can participate in framework contracts, which allow repeated or continuous supply on a “call-off” basis. Bidding documents are available for purchase for a non-refundable fee, and bids must include a valid business registration certificate, bid security, NRA tax clearance, and NASSIT clearance. The deadline for submission of bids in 2026 was 9th June, with public opening at EDSA's office in Freetown.

Additionally, Sierra Leone frequently posts distribution box tenders and related electrical equipment opportunities on platforms like Global Tenders, covering items such as fuse boxes, switchgear, circuit breakers, and connection cables.

Local Distribution and Sales Channels

Sierra Leone's distribution system is largely informal, with small shops, kiosks, and open-air markets dominating retail. Formal outlets are expanding in urban areas like Freetown. Importers and wholesalers play a key role in managing bulk imports through ports like Queen Elizabeth II Quay and distributing goods via storage facilities and retail networks.

For foreign suppliers, working with registered local agents or distributors is a practical approach, though not legally required. All formal businesses must be registered with the relevant authorities and obtain a Tax Identification Number (TIN) and NASSIT registration.

Key Considerations for Suppliers

Ensure compliance with EDSA technical specifications for distribution boxes. Participate in framework contracts to supply materials on a recurring basis. Work with registered local distributors or agents to navigate the local market.

Maintain proper documentation, including business registration, tax clearance, and social security compliance. By following these procedures, suppliers can effectively engage in the Sierra Leone electricity distribution sector and provide essential equipment like distribution boxes to support the national grid.
