Do armored cables need to be installed in cable trays

Overview

TC cables are not permitted to be installed outside of a cable tray system or raceway with only two exceptions (1) in outdoor locations supported by a messenger wire.

Key Takeaways

Metal-Clad (MC) armored cables are suitable and commonly used in cable tray installations, while AC cables are generally limited to dry, indoor locations. Compatibility with Cable TraysArmored cables, especially MC cables, are designed with a metallic sheath that provides mechanical protection, making them ideal for environments where cables may be exposed to physical stress, abrasion, or vibration.

According to NE

C Article 392, cable trays are intended to support open-air rated conductors, and MC cables are explicitly permitted for use in these systems.

M

C cables include a dedicated insulated grounding conductor, which enhances safety and allows installation in both indoor and outdoor locations, including wet areas, when properly jacketed.

A

C vs MC Cables in Cable TraysAC (Armored Cable): Typically features an interlocked metal armor with an internal bonding strip.

A

C cables are limited to dry locations and are not generally recommended for outdoor or wet cable tray installations.

M

C (Metal-Clad Cable): Contains a separate insulated ground wire and can be used in wet, dry, indoor, or outdoor environments.

M

C cables are widely used in industrial and commercial cable trays for power, lighting, and control circuits.

Installation Considerations

When installing armored cables in cable trays: Ensure the cable is UL listed and marked as cable tray rated. Maintain proper support and securing intervals, typically not exceeding six feet for MC cables. Observe fill limits: power cables should not exceed 40% of the tray cross-section, and control cables should not exceed 50%.

Separate high-power and low-power cables to prevent electromagnetic interference (EMI),. Avoid bending cables beyond their minimum bending radius to prevent damage to the armor or conductors. SummaryMC armored cables are suitable and commonly used in cable trays, providing mechanical protection, grounding reliability, and compliance with NEC standards.

A

C cables can be used in cable trays but are restricted to dry, indoor environments. Proper installation, support, and adherence to NEC fill and separation requirements ensure safe and reliable operation.

Using tray-rated Type TC or metal-armored Type MC cables, staying within fill limits, and choosing UL-classified components for grounding are all critical steps for building a compliant system.

Cable Tray Questions | Cable Tray Institute

Do you have any information available for recommended installation clearances for this type of cable tray? Answer: The NEC does not have a specific installation clearance, but indicates in section 318-6

Explaining NEC Article 392 on Cable Trays

Cables and conductors must be secured to the cable tray at intervals according to installation instructions. For non-horizontal runs, cables should be fastened securely to transverse

1910.305

Cable assemblies and flexible cords and cables shall be supported in place at intervals that ensure that they will be protected from physical damage. Support shall be in the form of staples, cables ties,

Tray-Rated Cable 101

Unlike standard tray-rated cables, exposed-run tray-rated cables can be installed in applications where the cable will drop from tray to tray or from tray to equipment, like a motor.

Cable Tray Fill Rules (NEC 392)

For cables 4/0 AWG and larger, cables are installed in a single layer (no stacking) and the sum of cable diameters must not exceed the tray width. For cables smaller than 4/0 AWG, the

Cables Allowed in NEC Tray Applications

Discover the essentials of cable tray installations, including permitted cable types, flame testing, mechanical and application requirements, and more.

NEC Standards for Cable Trays: Grounding, Fill Capacity

This article provides a comprehensive framework that governs various aspects of cable tray installations, including the types of cables that are deemed acceptable for use, requirements for
