EPON device OLT downlink wavelength

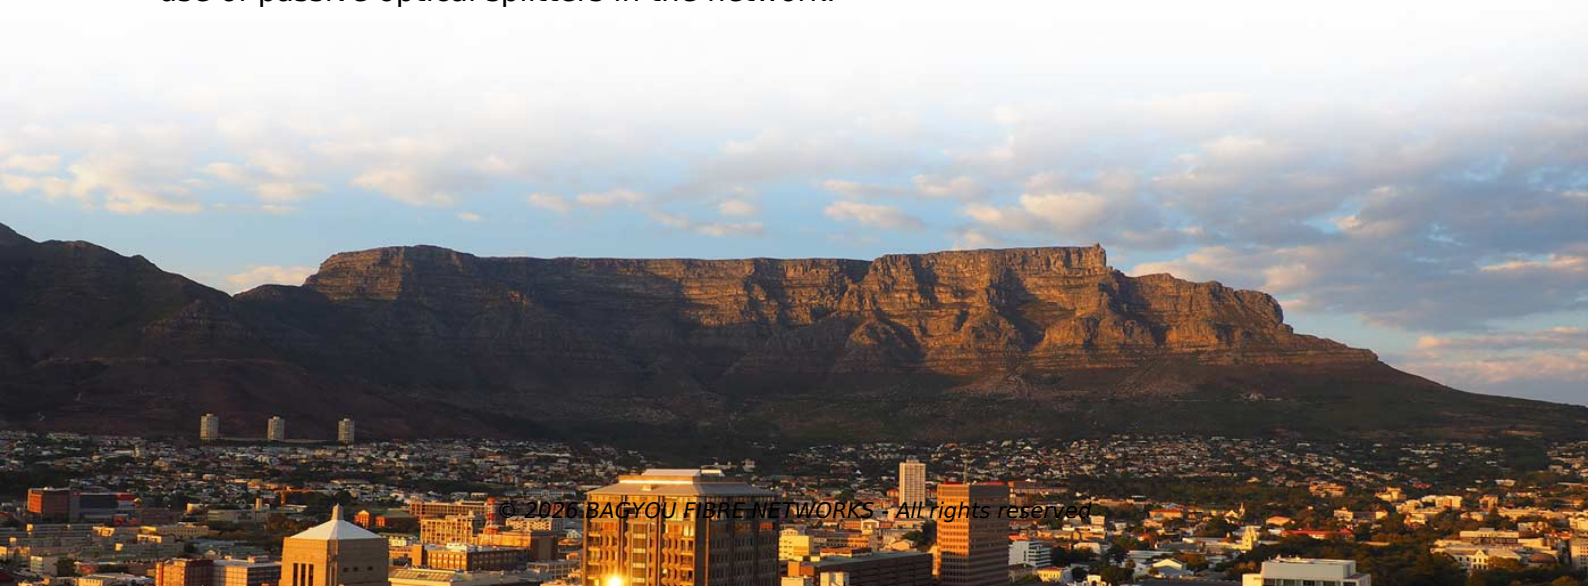

Overview

This wavelength allocation is specified in industry standards to deploy lower-cost optical components on the multi-point ONU side, reducing overall PON network deployment costs.

Key Takeaways

The downlink wavelength of a standard 1G EPON OLT is 1490 nm, while for 10G EPON OLT it is 1577 nm. 1G EPON OLTA 1G EPON system uses 1490 nm as the central downlink wavelength for transmitting data from the OLT to ONUs over a single fiber, while the uplink wavelength is 1310 nm. This configuration allows bidirectional transmission using wavelength division multiplexing (WDM) and supports distances up to 20 km.

10G EPON OLTFor 10G EPON (10G-EPON), the downlink wavelength is 1577 nm, and the uplink wavelength is 1270 nm. The 10G PON OLT is backward compatible with 1G EPON ONUs, and the downlink wavelengths for 1G and 10G services are isolated to prevent interference. Summary TableEPON TypeDownlink WavelengthUplink Wavelength1G EPON1490 nm1310 nm10G EPON1577 nm1270 nmThese wavelengths are standardized to ensure compatibility across EPON devices and to optimize the use of passive optical splitters in the network.

The Comprehensive Guide to PON Architecture: Mastering OLT,

Comprehensive guide to Passive Optical Networks (PON), covering OLT, ODN, ONU/ONT, GPON/XGS-PON/NG-PON2 standards, deployment strategies, and FTTH network

Introduction To Data Transmission Methods In PON Networks

This wavelength allocation is specified in industry standards to deploy lower-cost optical components on the multi-point ONU side, reducing overall PON network deployment costs.

GPON OLT Basics and Beyond: A Comprehensive Introduction

Downstream (1490nm wavelength): The OLT transmits optical signals in broadcast mode to all ONTs. Each ONT extracts its own data packets based on a unique identifier.

Recommendation ITU-T

This document outlines recommendations for wavelength allocation in gigabit-capable passive optical networks (G-PONs) to enable coexistence with additional services like next-generation access

What Is Passive Optical Networking (PON)? GPON vs. EPON

On the network shown in the following figure, a PON network consists of the optical line terminal (OLT), optical distribution network (ODN), and optical network unit (ONU). The OLT is an

PON EPON XPON XGSPON Difference In Transmission Rate and

At the same time, due to the maturity of equipment and technology, the current price of XGSPON products is much higher than that of XGPON equipment, with OLT being about 20% higher

A Comprehensive Guide to GPON and EPON Technologies in PON

EPON leverages the WDM (Wavelength Division Multiplexing) principle, enabling the transmission of multiple wavelengths through a single optical fiber to achieve a flexible network

EPON Explained: Unlocking High-Speed Fiber Networks with Passive ...

At its core, EPON uses wavelength division multiplexing (WDM) to separate upstream and downstream traffic over a single fiber. The OLT broadcasts data downstream to all ONUs, which
