Explosion-proof distribution box with separate rainproof cover

Overview

Waterproof Distribution Box | IP65 Plastic DIN Rail Built for outdoor reliability, each waterproof distribution box in our AT & HT range balances sealing.

Key Takeaways

Explosion-proof distribution boxes with optional rainproof covers are available in stainless steel or other durable materials, designed for hazardous and outdoor environments.

Key Features

Explosion Protection: These distribution boxes are designed with flameproof enclosures (Ex d) suitable for hazardous zones containing combustible gases or dust. They comply with standards such as Ex db IIC T6–T41 and Ex tb IIIC T80°C–T130°C, ensuring safe operation in explosive atmospheres. Materials: Common materials include 304 or 316L stainless steel and Q235 steel, providing corrosion resistance and durability.

Some models also use aluminium or polyester for lighter applications.

Rainproof/

Waterproof Options: For outdoor installations, a separate rainproof cover or protective cabinet can be added to shield the box from rain, dust, and UV exposure. IP65–IP68 rated enclosures ensure reliable sealing and long-term protection. Design and Installation: Many boxes feature specialized hinge structures to prevent damage to flameproof joints during opening and closing, extending service life.

They can be combined or installed modularly to save space and accommodate various distribution systems.

DI

N rail configurations are often supported for flexible wiring and component mounting. Customization: Manufacturers offer tailored solutions, including custom sizes, internal layouts, and material selection to meet specific industrial requirements. Applications: Suitable for control and distribution systems, including main circuit switch boxes, motor starting boxes, terminal boxes, and outdoor power management for lighting, pumps, or solar systems.

Recommendations

For hazardous indoor or outdoor zones, choose a stainless steel explosion-proof box with Ex d certification. Add a rainproof cover if the installation is exposed to weather.

Confirm I

P rating (IP65–IP68) for dust and water protection. Consider modular or DIN rail options for easier wiring and future expansion. Consult manufacturers for customized solutions to match your specific voltage, current, and environmental requirements.

This combination ensures both explosion safety and weather resistance, making it ideal for industrial, chemical, or outdoor electrical installations.
