Fiberglass cable trays are itchy

Overview

Fibreglass dermatitis is a form of mechanical irritant contact dermatitis due to penetration of the stratum corneum of the skin by small fragments or spicules of fibreglass. This irritating condition comes from tiny glass fibers getting lodged in your skin, causing itching, irritation, and sometimes a rash. Whether you're a seasoned tradesperson or a weekend warrior in the attic, here's what you need to know about preventing and treating fiberglass itch. If you have regular or occasional contact with. Fibreglass (American spelling fiber glass) is a man-made fibrous form of glass produced through a process called pultrusion. It is a common concern for individuals working in industries such as construction, insulation, and manufacturing, where fiberglass materials are. Fiberglass rash is usually temporary, and there are simple ways to calm the irritation and help your skin feel better fast. If you are struggling with fiberglass.
