Green Optical Power Meter

Overview

GREENLEE OPM510 Optical power meter Compact and extremely rugged, battery-powered fibre-optic power meter and laser sources with interchangeable connector.

Key Takeaways

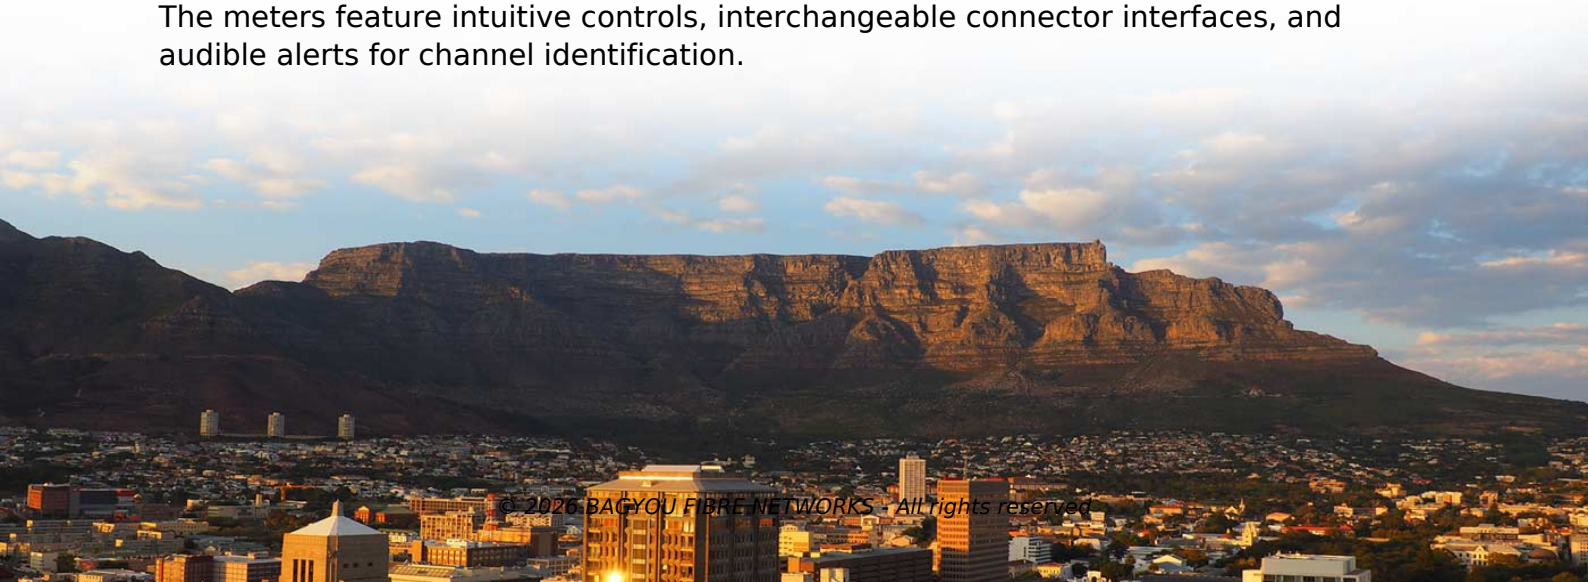

Green optical power meters are specialized devices capable of measuring optical power at green wavelengths, typically around 532 nm, and are available in both fiber-optic and industrial laser configurations.

Fiber-

Optic Green Power Meters

For fiber-optic applications, devices like the GREENLEE OPM510 power meter can detect multiple wavelengths, including green light, with high accuracy. These meters are compact, rugged, and battery-powered, making them suitable for field use. They support singlemode and multimode fibers, with calibrated detection and display of absolute optical power in dB/dBm for wavelengths including 850, 1300, 1310, 1490, 1550, and 1625 nm, and can be paired with compatible light sources for precise link-loss measurements.

The meters feature intuitive controls, interchangeable connector interfaces, and audible alerts for channel identification.

Industrial Laser Green Power Meters

For high-power green lasers, such as those used in copper welding or automotive battery production, the Ophir Helios Plus power meter can measure wavelengths in the 450–550 nm range, covering green and blue lasers. This meter is compact, does not require water cooling, and can handle high-power lasers up to 12 kW. It offers multiple communication options (PROFINET, Ethernet/IP, RS232) for integration into automated production systems, allowing precise monitoring of laser performance in industrial applications.

Key Features to Consider

Wavelength Range: Ensure the meter supports green wavelengths (around 532 nm) or the specific green laser used. Power Range: Check the meter's measurement range to match your laser or optical source. Detector Type: InGaAs detectors are common for fiber-optic meters, while high-power industrial meters may use specialized sensors.

Portability: Battery-powered, compact meters are ideal for field measurements, while benchtop meters suit lab environments. Calibration and Accuracy: Look for meters with calibrated detection for absolute power measurements in dB/dBm. Connectivity: Industrial meters may offer network integration for automated monitoring.

Both fiber-optic and industrial green optical power meters provide reliable measurement solutions, but the choice depends on whether your application involves fiber-optic links or high-power green lasers in industrial settings.
