How to connect the fiber optic cable puller connector

Overview

Key Takeaways

To connect a fiber optic cable to a puller, always use the cable's strength member, secure it with a pull-eye or mesh sleeve, and attach it to the puller according to manufacturer instructions to prevent damage and ensure safe pulling.

Step-by-

Step Connection Process1.

Prepare the Cable

Strip a small portion of the outer jacket to expose the strength member (usually Kevlar or aramid yarn) without damaging the fiber inside. Avoid pulling the cable by the outer jacket, as this can stretch or tear it, compromising the connector and signal integrity. 2.

Attach the Pull-

Eye or Pulling ConnectorLoop the exposed strength member through a pull-eye, mesh sleeve, or pulling sock designed for your cable type. Double-back and secure the yarn with tape or a knot to ensure it will not slip during the pull. For pre-terminated cables, use a pulling tool or clip that accommodates the connector head, ensuring it fits within the mesh sleeve.

3. Connect to the PullerInsert the pull-eye or mesh sleeve into the puller's capstan or attachment point according to the puller's manual. Ensure the connection is aligned and locked to prevent twisting or misalignment during pulling.

Set the puller's tension limit to avoid exceeding the cable's maximum pulling load. 4.

Safety and Testing

Wear safety gloves and glasses to protect against fiber shards. Verify that the cable is properly secured and that the puller is operating within safe tension limits. Test the connection with a visual fault locator or OTDR if possible to ensure no immediate damage occurred during setup.

5.

Begin Pulling

Operate the puller slowly, monitoring tension and cable alignment. Avoid sharp bends and maintain the minimum bend radius to prevent signal loss or fiber breakage. By following these steps, you ensure that the fiber optic cable is securely connected to the puller, minimizing the risk of damage and maintaining optimal network performance.

Proper use of the strength member and pull-eye is critical for both safety and cable longevity.
