How to strip the layers from an optical fiber cable

Overview

Good fiber optic stripping techniques in your cable assembly process are crucial. See best practices for how to strip fiber optic cable buffers & jackets.

Key Takeaways

Use a precision fiber optic jacket stripper or sheath stripper to safely and efficiently remove the outer layer without damaging the underlying fibers.

Tools for Quick Stripping

Mechanical Fiber Strippers: Handheld tools with sharp, sized slots for the outer jacket, primary coating, or secondary coating. They allow you to hold the cable, press the jaws, and slide the jacket off cleanly. Sheath Strippers: Designed for larger cables or microcables, these tools can strip jackets up to 3.

5mm quickly and often include adjustable blade depth for precision. Kevlar Scissors: Used to cut aramid yarn or strength members after the jacket is removed.

Thermo-

Mechanical Strippers: Use heat to soften the jacket before removal, reducing the risk of nicking the fiber.

Step-by-

Step Procedure

Prepare the Work Area: Ensure a clean, well-lit space free of dust and debris. Lay out all tools within reach. Select the Correct Tool and Slot: Match the stripper slot to the cable diameter to avoid cutting underlying aramid yarn or fiber.

Adjust Blade Depth: For sheath strippers, set the blade depth to just penetrate the outer jacket without touching the fibers. Make a Circumferential Cut: Place the tool around the cable at the desired strip length and rotate it in a spiral or circular motion to cut the jacket. Remove the Jacket: Pull off the cut section using fingers or needle-nose pliers.

Ensure the edge is clean and not torn. Trim Strength Members: Use Kevlar scissors to cut exposed aramid yarn if necessary.

Tips for Efficiency and Safety

Always maintain sharp cutting edges to prevent tearing or crushing the jacket. Strip each layer progressively—outer jacket first, then aramid yarn, then buffer coatings—to avoid fiber damage. Inspect the stripped area for any nicks or cuts in the fibers before proceeding with termination or splicing.

For midspan stripping, a helical or spiral cut with a sheath stripper is ideal for clean removal. Using the right tool and following these steps ensures fast, clean, and safe removal of the outer layer, minimizing the risk of fiber damage and improving the quality of terminations or splices.

Stripping Techniques For Your Fiber Optic Cable

Good fiber optic stripping techniques in your cable assembly process are crucial. See best practices for how to strip fiber optic cable buffers & jackets.

Fiber and Cable Stripper – Types, Uses & Guide

Learn how to use fiber strippers, cable cutting scissors, and armored cable slitters. Discover their applications in fiber splicing, cable prep, and FTTH.

Fiber U Lesson Plan: Basic Skills Lab, Remote

You have successfully completed this exercise when you have been able to strip the jacket and both buffer coating layers from the fiber without breaking the fiber.

How to Strip and Prepare Fibre Optic Cable for Termination: A ...

© 2026 BAGYOU FIBRE NETWORKS - All rights reserved

In this informative guide, we''ll walk you through the step-by-step process of stripping and preparing fibre optic cable for termination, covering techniques, tools, and best practices to help you

The Ultimate Optical Fiber Stripper Guide

Explore Optical Fiber Stripper types and uses. Learn pro techniques for precise stripping to ensure reliable network performance with top tools.

Fiber Strippers – tools, mechanical, thermal, chemical, plasma,

A fiber stripper is a precision tool used to remove the protective polymer fiber coatings from an optical fiber. This process exposes the bare glass without scratching or nicking it, which is required for tasks

trueCABLE''s Fiber Optic Cable Strippers: The Essential Tool for Fiber

Precise fiber optic stripping matters. See trueCABLE''s 3-hole Fiber Optic Stripper features, safe use tips, and step-by-step guide for flawless terminations.

Fiber U Lesson Plan: Basic Fiber Optic Skills Lab

Using zipcord or simplex cable, strip the jacket, cut the fiber off and attach a pulling eye to the cable. Swivel eyes like those used in the video are available at a

Fiber Optic Termination Tools

These fiber buffer stripping tools provide a quick, easy, and reliable way to remove the buffer from an optical fiber in preparation for connectorization. A fiber guide

Fiber Cable Stripping Tools: A Comprehensive Guide

Fiber cable stripping tools are essential for anyone working with fiber optics. Understanding the different types of tools, their applications, and best practices is crucial for ensuring successful installations and

13,824-Core Fiber Optic Cable: Furukawa Electric

Furukawa Electric''s Lightera begins mass production of the world''s highest-class 13,824-core ultra-high-density fiber optic cable. Learn how this

NYT Connections archive

Every NYT Connections puzzle ever published is listed here, organised by date, with all four category groups and their sixteen words. The NYT only offers the current day''s puzzle for free,
