How to use the new optical cable terminal box

Overview

Learn how to install a fiber optic termination box step-by-step for FTTH projects. Covers mounting, splicing, routing, labeling, and testing for indoor/outdoor use. Installing a fiber optic termination box is one of those jobs that looks simple on paper, but it's easy to. The fiber termination box is an interface between the fiber cable from the line side and the pigtails to be passed to the fiber distribution frame. A fiber pigtail is a specific hardware connection used for cable termination. Thus, a fiber termination box is used to terminate the optical fiber. A fiber termination box is the standard instrument used in fiber optic networks to connect, secure, and protect optical fibers at the terminating point. It functions as a junction between the incoming fiber cable and the outgoing customer-side fiber cable, where one fiber can be spliced, patched. A common question we receive is: How do you use a fiber-optic termination box?

We recommend using a termination box if you're ordering an assembly with more than two strands. It helps keep your connectors free from contamination and dust, while also keeping your assembly neat and organized. The outlet port is made of plastic.
