MPO Connector Low Temperature Resistance Specifications

Overview

The MPO connector assemblies were tested for thermal aging, thermal cycle and TWAL tests to verify the service life of MPO connector under 105degC environment.

Key Takeaways

MPO connectors typically operate reliably down to -40°C in extreme environment configurations, with standard assemblies rated for -10°C to +60°C. Operational Temperature RangesMPO connectors are designed to function across a range of temperatures depending on the product category and application: Standard controlled environment assemblies: Suitable for -10°C to +60°C, which is sufficient for typical data center conditions. Extreme environment assemblies (Category E): Rated for -40°C to +85°C, providing enhanced low-temperature resistance for outdoor or industrial applications.

Standards and TestingMPO connectors are tested and qualified according to international standards to ensure performance under low-temperature conditions: IEC 61754-5 / TIA 604-5: Defines the connector interface and ensures compatibility.

IE

C 61753, IEC 61755-3-4, IEC 61300-3-31: Specify optical performance, including tolerances in fiber position and return loss, which are critical under temperature variations. Telcordia GR-1435-CORE: Provides reliability testing for multi-fiber optical connectors, including environmental stress tests.

JEDE

C JESD22-A104F (Temperature Cycling) and JESD22-A103E (High Temperature Storage Life): Used for qualification of connectors in high- and low-temperature conditions, ensuring long-term reliability.

Performance Considerations

Strain relief and material selection in MTP/MPO connectors improve low-temperature stability, preventing fiber misalignment or mechanical failure. Thermal cycling tests simulate repeated exposure to low temperatures, confirming that optical performance (insertion loss, return loss) remains within acceptable limits. Extreme low-temperature applications may require connectors specifically rated for Category E or custom assemblies to maintain performance in harsh environments.

Summary

For most data center applications, MPO connectors rated for -10°C to +60°C are sufficient. For industrial, outdoor, or extreme cold environments, -40°C to +85°C rated connectors are recommended. Compliance with IEC, TIA, and Telcordia standards ensures that low-temperature performance is reliable and consistent, with proper testing for thermal cycling and environmental stress.
