Mlx and al distribution boxes

Overview

MLX-QS DISTRIBUTION BOX Ask Alldatasheet AI for the information you need. AI instantly answers questions aboutMLX-QS DISTRIBUTION BOX's overview, technical.

Key Takeaways

MLX and AL distribution boxes are specialized electrical enclosures designed for power and lighting distribution, with MLX boxes typically used in building and industrial applications, and AL boxes offering compact, waterproof solutions for automotive and small vehicle circuits.

X Distribution BoxesMLX distribution boxes, such as the MLX-1000 series, are primarily used for lighting and power terminal distribution in residential, commercial, and industrial settings, including factories, shopping malls, mines, and office buildings. Key features include: Material: Often made from advanced engineering plastics for durability and insulation. Applications: Suitable for new home buildings, industrial plants, and large-scale electrical installations.

Design: Provides organized terminal connections for lighting and power circuits, facilitating safe and efficient distribution. Certifications: Many MLX boxes comply with national and international standards for electrical safety and quality. These boxes are widely used in environments where robust, reliable, and modular power distribution is required.

L Distribution BoxesAL distribution boxes, such as the HWB60-AL series from Littelfuse, are hard-wired, waterproof power distribution modules designed for automotive and small vehicle applications. Key characteristics include: Waterproofing: Achieves IP68 and IP69K ratings, making them dust-tight and resistant to high-pressure water jets. Compatibility: Accepts MINI® fuses, MINI® circuit breakers, MCASE™ fuses (with adapter), diodes, and ISO 280-style relays.

Construction: Thermoplastic cover with gasket and AssureLatch™ positive-sealing latches for secure closure. Customization: Allows direct wire-to-component connections and terminal position assurance (TPA) for reliable wiring. Applications: Ideal for protecting accessory circuits, overflow circuits, or serving as a main power distribution block in small vehicles.

Choosing between them depends on the environment, required IP rating, and type of circuits being protected. Both types provide reliable, organized, and safe distribution for their respective applications.
