Price for grounding and neutral connection of distribution boxes

Overview

The main cost drivers are labor time, ground rod or grounding conductor length, permits, and any trenching or concrete work needed.

Key Takeaways

Neutral and grounding terminal blocks for distribution boxes typically range from $5 to $30 per unit, depending on material, size, and configuration.

Typical Options and Prices

Copper Bridge-

Type Terminal BlocksDesigned for secure neutral and grounding connections in distribution boxes. Available in 4, 5, 6, and 8-hole configurations. Pure copper construction ensures high conductivity and durability.

Price: Approximately $10–$25 per block, depending on the number of holes and supplier.

Brass Grounding Strips

Pack of 10 brass earth/neutral strips suitable for PE30 distribution boxes, lighting boxes, and cabinets. High strength, corrosion-resistant, and easy to wire. Price: Around $15–$20 for a pack of 10, making it roughly $1.

50–$2 per strip.

DIN Rail-

Mounted Grounding TerminalsGreen/yellow housing for easy identification, mechanically clamped onto DIN rails. Provides reliable grounding and neutral connections while saving installation time. Price: Typically $5–$15 per terminal, depending on size and current rating.

Factors Affecting Price

Material: Copper blocks are generally more expensive than brass due to higher conductivity. Number of connection points: More holes or pins increase the cost. Mounting type: DIN rail-mounted terminals are convenient but may cost slightly more than simple panel-mounted strips.

Supplier and region: Prices vary by distributor and shipping location.

Recommendation

For small residential projects, DIN rail-mounted copper or brass terminals are cost-effective and easy to install. For industrial applications requiring higher current capacity, pure copper bridge-type blocks are preferred for durability and conductivity. Always check the supplier for exact pricing and availability before purchase.
