Protection of Lighting Distribution Box Socket Circuits

Overview

This chapter covers receptacle outlet spacing, GFCI (ground-fault circuit-interrupter) and AFCI (arc-fault circuit-interrupter) protection, lighting outlet locations, raceway and box fill limitations, box and panel board installation, equipment grounding and flexible cords. The distribution fuse box forms the heart of every electrical system and ensures that lighting systems can be operated safely, efficiently and in accordance with standards. It protects cables and devices from overload, disconnects circuits in the event of a fault and thus guarantees maximum safety. It is a vital part and central hub of any electrical system. Whether it's a home, office, or factory. The PZ Series Lighting Distribution Box, fully named "Low-Voltage Lighting Power Distribution Box", is a core terminal power device designed for AC 50Hz, 220V/380V low-voltage systems.
