

Recommended Configuration for 10 Gigabit Aggregation Switch

Overview

If you want to stay in the Unifi line, the USW-Aggregation is the best bang for the buck, especially if, as you stated, you want more than 4 ports at 10 gigabit.

Key Takeaways

To configure aggregation on a 10 Gigabit switch, use LACP or static LAG to combine multiple 10GbE ports into a single logical link, ensuring consistent speed, full-duplex mode, and proper VLAN assignment for load balancing and redundancy.

Key Concepts

Link Aggregation (LAG) allows multiple physical interfaces to act as a single logical interface, increasing bandwidth and providing redundancy.

LA

G can be configured as: Static LAG: Manually configured on both ends; no automatic failover and prone to misconfiguration.

LAC

P (Link Aggregation Control Protocol): IEEE 802. 3ad standard; dynamically negotiates aggregation, provides automatic failover, and ensures both ends agree on settings.

MC-LAG (Multi-Chassis LAG): Advanced setup where two switches act as a single logical unit, providing load balancing and redundancy across chassis.

Configuration Steps

Verify Port Capabilities: Ensure all member ports support 10GbE, full-duplex, and compatible SFP modules. **Clear Existing Configurations:** Remove any VLAN, isolation, or previous aggregation settings on the ports to avoid conflicts. **Create the Aggregated Interface:** On Cisco/Juniper/H3C switches, define a port channel or aggregated Ethernet interface.

Assign member ports to the aggregation group, ensuring all ports have the same speed and duplex mode.

Assign VLA

Ns: Configure the aggregated interface as a trunk or access port depending on your network design.

Map VLA

Ns to the aggregated interface to allow traffic segregation.

Enable LAC

P (if used): Activate LACP on both ends of the link to allow dynamic negotiation and failover. Verify that all member ports are in the "active" state. **Traffic Prioritization (Optional):** For special traffic, configure ACLs, traffic classifiers, and QoS policies to prioritize certain VLANs or IP ranges.

Apply traffic policies to the aggregated interface to ensure high-priority traffic is forwarded efficiently.

Best Practices

Consistent Port Configuration: All member ports must have identical speed, duplex, and MTU settings.

Downstream-to-

Upstream Configuration: Apply changes first on downstream devices, then upstream, to prevent traffic disruption. **Monitor and Verify:** Use commands like show port-channel summary (Cisco) or display ae interface (Huawei/H3C) to verify aggregation status. Check load balancing and failover behavior during link failure tests.

VD

C Considerations (Cisco Nexus): If using virtual device contexts, assign 10GbE ports in groups to VDCs and avoid running critical traffic through the master VDC unless necessary. By following these steps, a 10 Gigabit switch can be configured for high availability, increased bandwidth, and efficient traffic distribution across aggregated links.

Recommendations for a 10Gbps switch : r/Ubiquiti

If you want to stay in the Unifi line, the USW-Aggregation is the best bang for the buck, especially if, as you stated, you want more than 4 ports at 10 gigabit. One limitation to be aware of: The Aggregate

EtherChannel Configuration on Cisco Switches (LACP, PAgP, Static ...

EtherChannel allows you to combine 2 to 8 physical Fast Ethernet, Gigabit Ethernet, or 10 Gigabit Ethernet ports into a single logical channel, providing: Increased Bandwidth: Aggregated

Data Center Aggregation Layer Design and Configuration with ...

Connect the two Cisco Nexus 7000 Series Switches through redundant 10 Gigabit Ethernet links (operated in dedicated mode) from 10 Gigabit Ethernet line cards for the purpose of forming the peer

Configure Gigabit and 10-Gigabit Ethernet Interfaces | Junos OS ...

Learn how to configure link settings and IP options on Gigabit and 10-Gigabit Ethernet interfaces. Also, this topic includes how to configure Gigabit Ethernet interfaces with ELS support.

10 Gigabit Switches Powering Business Connectivity

Consider 10G infrastructure when deploying high-density wireless access points, connecting NAS storage accessed by multiple users concurrently, aggregating multiple gigabit switches, or supporting

SODOLA 12 Port 10Gb Managed Switch, 8x10G SFP+ & 4x10GBase

□Pro-Level Web Management□Use the 10G switch to easily configure LACP link aggregation, QoS traffic prioritization, VLAN segmentation, and SNMP monitoring and more basic management

Aggregated Ethernet Interfaces Overview | Junos OS | Juniper Networks

You can configure LAGs to connect a QFX Series product or an EX4600 switch to other switches, like aggregation switches, servers, or routers. This example describes how to configure LAGs to connect

10GbE Switch Recommendations : r/homelab

However, I am missing one important part, I need a 10GbE switch, with at least 6 ports. Ports could be RJ-45 or SFP+, doesn't matter to me, as this will act like an aggregation switch.

Cisco SRW224P 24-Port 10/100 + 2-Port Gigabit

The Cisco ® SRW224P 24-Port 10/100 + 2-Port Gigabit Switch (Figure 1) offers a highly secure way to expand your network. Web-based

10 Best 10-Gigabit Network Switches (April 2026)

These best 10-gigabit network switches in 2026 represent the top performers that balance speed, reliability, and value for home labs, small

TP-Link: Your Smart Home, Simplified

We are a US-based leader in Wi-Fi and smart home technology. See why families trust TP-Link to make their home smart, secure, and effortlessly connected.

R&S®LANCOM XS-6128QF: R&S Networks and Cybersecurity

For best possible performance in your distributed networks, we recommend the switch aggregation via SFP+ (10G). The R&S®LANCOM Access Switches listed here are equipped with SFP+ ports and

D-Link 24-port Gigabit Smart Managed Switch with 4x 10G SFP+

The D-Link DGS-1250 Series Smart Managed Switches deliver real value as an Enterprise Access and Small-to-Medium Business (SMB) Access/Aggregation solution. They provide a range of physical

Ruckus ICX 7550-48P-E2 Managed Stackable Switch – 48 x Gigabit

The Ruckus ICX 7550-48P-E2 is a high-performance enterprise-class Layer 3 managed Ethernet switch designed to deliver exceptional scalability, reliability, and advanced networking capabilities for

Data Center Aggregation Layer Design and Configuration with ...

Introduction This chapter covers the design recommendations for a data center design deployment consisting of a Cisco Nexus® 7000 Series Switch at the aggregation layer and a Cisco Nexus 5000
