Southern European Finished Mesh Cable Tray Supplier

Overview

Our products are designed to facilitate cable management and installation of wire mesh cable trays in an efficient way considering safety first.

Key Takeaways

Leading Southern European manufacturers of mesh cable trays include Spina Group (Italy) and Legrand/Cablofil (France), offering high-quality wire mesh and stainless steel solutions compliant with European standards.

Key Manufacturers

Spina Group (Italy) Schiavetti Tekno, part of Spina Group, is a prominent Italian manufacturer specializing in cable trays and accessories for industrial and instrumentation systems. They offer a wide range of products including wire-mesh, ladder, perforated, and closed-bottom trays made from stainless steel or galvanised materials. Their systems are designed for strength, corrosion resistance, and long-term performance, suitable for energy, infrastructure, and plant engineering projects.

Custom sizes and compatibility with Unistrut systems are available, and all products comply with EN and UL standards. Spina Group also provides technical support and after-sales assistance for industrial installations (Spina Group). Legrand / Cablofil (France) Legrand's Cablofil brand is a leading French manufacturer of wire mesh cable trays, known for their ease of installation, adaptability, and durability.

Their mesh trays are widely used in commercial, industrial, and IT environments, offering solutions that meet EN 61537 and ISO 9001 standards. Cablofil focuses on sustainable, long-lasting products suitable for complex infrastructure projects, including energy and transportation sectors (Apex Tray). Additional European Options While not exclusively Southern European, companies like DKC Europe provide a comprehensive range of cable tray systems across Europe, including mesh trays, and may serve Southern European markets with local distribution and support (DKC Europe).

Specialist manufacturers such as Valdinox also offer technical advice and custom solutions for mesh cable trays in Europe (Valdinox).

Considerations for Selection

Material: Stainless steel for corrosion resistance, galvanised steel for cost-effective durability. Compliance: Ensure products meet EN 61537, ISO 9001, and other relevant European standards. Customization: Check for availability of custom sizes, load ratings, and compatibility with existing support systems.

Industry Application: Consider hygiene requirements for food or chemical industries, or heavy-duty specifications for industrial plants. These manufacturers provide reliable, high-quality mesh cable trays suitable for a variety of industrial, commercial, and infrastructure projects in Southern Europe.
