

Stick optical module sfu

Overview

The GPON Stick optical module, referred to as the "SFP encapsulated PON ONU module," stands out as a revolutionary component engineered to replace SFU optical cats and enable Gigabit single-port photoelectric conversion within PON networks. A Passive Optical Network (PON) employs fiber optics and splitters to distribute data from a single source to multiple users using a point-to-multipoint topology. This compact module seamlessly integrates GPON ONU's PON. Pre-installed 8311 (v2. 0) Community Firmware in both Banks: Streamlined device configuration with one-click web setup! Advanced Features: Data encryption, VLAN configuration, fault alerts, dynamic bandwidth allocation, and multicast passthrough. 1, supporting symmetrical 10Gbps upstream and downstream transmission. Compared with. XPON STICK is an ONU with SFP interface, small and exquisite, plug and play, with good heat dissipation and shielding effects. Hot-swappable to work in the SFP slots of switches, cameras and other equipment, so that the whole machine can be directly connected to the GPON or EPON optical network. Simplified POL Deployment: Bypass the need for a large OLT chassis. This single stick is all you need to start your fiber network. Plug-and-Play: Installs directly into any SFP port (Switch, router or media converter).
