The core switch in the data center suddenly restarted

Overview

The switch has a hardware failure or system software bug. On the CE12800, CE16800 and CE12800E switches, run the display device command to check whether the switch has only one MPU. show version content Last reload reason: abort at PC 0x0 cisco WS-C4506-E (MPC8548) processor (revision 12) with 524288K bytes of memory. 511K bytes of non-volatile. i am using Cat 4507 as core switch in the network. Let's take a closer look at the infrastructure and the troubleshooting case. This government organization's network has a 2-tier network design for a corporate headquarter. User-initiated: Triggered via CLI, UI, DCUI, IPMI, or similar management interfaces. Kernel crash: Caused by PSOD events (e. So far they've been 1 at a time and it has not caused any downtime for our VM's but switch. We already rebooted both switches, we tried serial port access (always present Authentication Failed message) we tried to reset all the settings and restore from a backup, but the restore operation failed with a series of invalid commands (It seems that when it was taken, the equipment was running.

Core Switch reboot

My recommendation is to upgrade the firmware, otherwise, raise a TAC Case so TAC will be able to diagnose the crash.

Solved: Core Switch reboot

==Are both the crashes (Core 1& Core2)showing the same behaviours. ==As you mentioned its transient kind of issue,is it something similar to what happened with Soft/Hard Parity.

Troubleshooting War Stories: Part 2

The solution to reviving this core switch was unbelievable. Let''s take a closer look at the infrastructure and the troubleshooting case.

Investigating Unexpected ESXi Reboot or Shutdown

If an ESXi host outage is not caused by a user-initiated reboot, shutdown, or kernel error, the physical hardware likely restarted abruptly. This can happen due to power loss, faulty

Switch rebooting when system reboots | DELL Technologies

You can check the switch configuration and resource utilization to identify any bottlenecks. There are a configuration issue, a bug in the switch firmware, or a high volume of traffic.

I totally fucked up our network core switch and everything is ...

We have a pair of Dell N3224P-ON switches and today''s morning my colleague gave me a task and instructions to remove some unused VLANs. I''m sure I removed the correct VLANs. When I saved

A Switch Restarts

If the cause is "Reset board from command (CPU Reset)," a user has restarted the switch manually. If the cause is "board cold reset (COLD Reset)," the switch restarts due to a power

how to check the reason of switch Cisco restart?

Unless you have a restart scripted for some reason it''s likely you ran into an uptime bug on the box. Check your version as recommended. And if you are behind you should update this switch.

Troubleshoot unexpected reboots using system event logs

© 2026 BAGYOU FIBRE NETWORKS - All rights reserved

A normal reboot occurs when a computer is shut down or restarted using the shutdown or restart option in Windows. An unexpected reboot occurs when a computer is running normally but

Hyper V Failover Cluster Issues

Our core switch was killing cluster traffic. I pulled the inter-connect out of the core and set up a separate fiber between data centers with private switches that bypasses the core entirely.

I totally fucked up our network core switch and everything is ...

I totally fucked up our network core switch and everything is down right now I''m just an apprentice and I don''t know what I''ve done wrong! We have a pair of Dell N3224P-ON switches and today''s morning

Core Switch Randomly Restarting

My entire network is run off of HP ProCurve 2910al-48G-PoE (J9148A) switches and everything has ran perfectly for 3 years. Last week we began experiences internet and network

Troubleshooting War Stories: Part 2

Each of those access switches has two fiber uplinks - one going to CORE-SW-1, and the other to CORE-SW-2 in the data center. This redundant

CORE Switch 4507R Suddenly restarted

Hi Experts my CORE Switch 4507R Suddenly restarted (Powe is good), and gets the business down for 30 Mts,my boss came to me and asks why it has restarted, what is the root cause

Is there a risk in restarting a Cisco switch with uptime of 8 ...

23 votes, 54 comments. I have a Cisco 3750 switch in production with uptime of almost 8 years. If I restart the switch, would there be any risk of it

Network Switch Keeps Rebooting

Agree, it''s probably time for a new switch, and a managed one at that. If this is your core switch, you can''t possibly be expected to manage the network without a managed switch.
