What is a redundant ring network for industrial switches

Overview

Redundant Ring Technology for Industrial Ethernet ApplicationsIn this white paper, we first discuss traditional redundant technology, including their netwo.

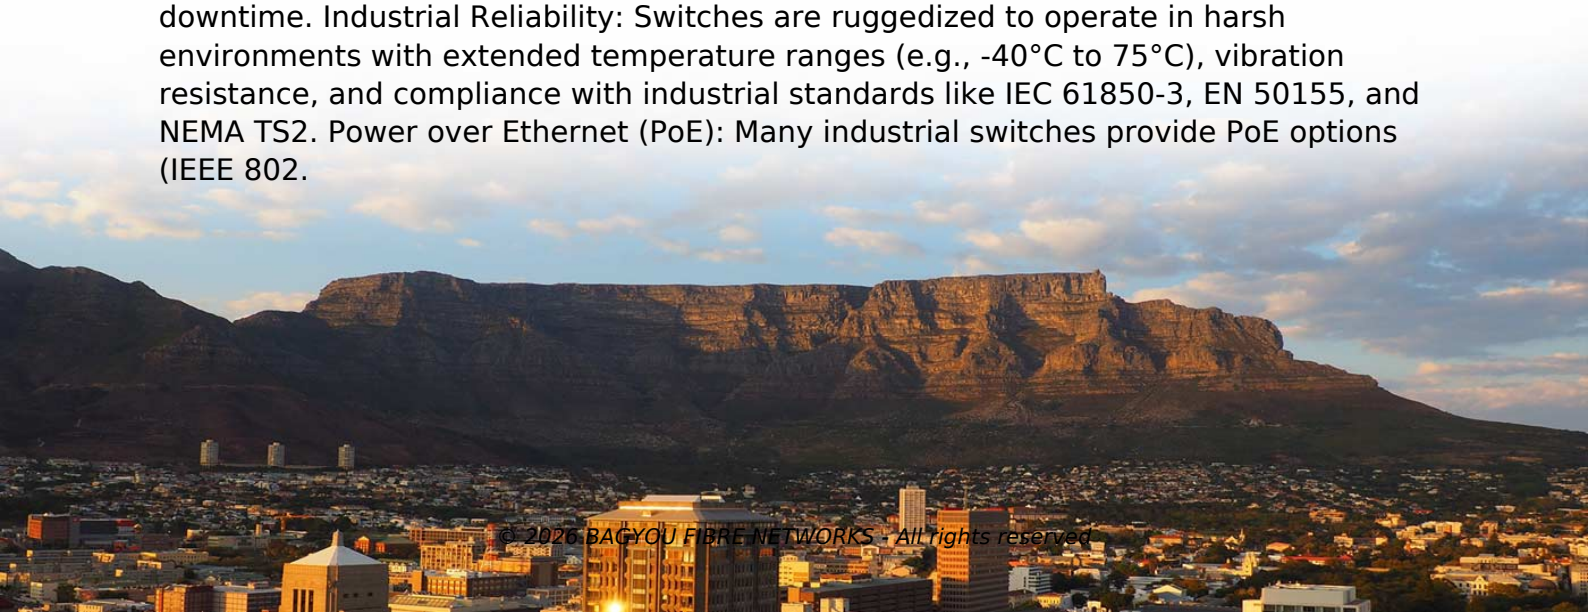

Key Takeaways

Industrial-grade redundant ring network switches provide fault-tolerant, high-availability Ethernet connectivity with sub-50ms recovery times for critical industrial applications.

Key Features

Redundant Ring Topology: These switches are designed to form a ring network where each node connects to two adjacent nodes, creating a loop that ensures continuous connectivity even if a link or switch fails. Fast Recovery Protocols: Industrial switches support protocols such as Ethernet Ring Protection Switching (ERPS, ITU-T G. 8032), O-Ring, O-Chain, MRP, and Rapid Spanning Tree Protocol (RSTP).

These protocols detect failures and reroute traffic within sub-50ms, minimizing downtime. Industrial Reliability: Switches are ruggedized to operate in harsh environments with extended temperature ranges (e.g., -40°C to 75°C), vibration resistance, and compliance with industrial standards like IEC 61850-3, EN 50155, and NEMA TS2. Power over Ethernet (PoE): Many industrial switches provide PoE options (IEEE 802.

3af/at/bt) to power devices such as cameras, sensors, and wireless access points without additional cabling. Management and Monitoring: Managed switches offer centralized control via utilities like Open-Vision or web-based interfaces, enabling configuration, monitoring, and firmware updates across multiple switches. Scalability and Interoperability: Redundant ring switches can support multiple rings, sub-rings, and mixed protocols, allowing integration of devices from different vendors while maintaining network resilience.

ApplicationsIndustrial-grade redundant ring switches are ideal for SCADA systems, PLC networks, process automation, transportation systems, energy distribution, and smart city infrastructure where real-time data and minimal downtime are critical. Example ProductsORing IES-3080: Managed redundant ring switch with 8x10/100Base-T(X) ports, supporting O-Ring, O-Chain, MRP, MSTP/RSTP/STP, and centralized management via Open-Vision. Moxa Industrial Switches: Layer 2/3 managed switches with industrial-grade reliability, multiple protocol support, and certifications for rail, power, and transportation applications.

Extreme Networks IS

W Series: Rugged Layer 2 switches with full redundant ring technology, PoE support up to 90W per port, and integration with Fabric Connect for automated provisioning. SummaryIndustrial-grade redundant ring network switches combine robust hardware, fast recovery protocols, and flexible management to ensure high network availability in mission-critical industrial environments. They are essential for minimizing downtime, maintaining real-time communication, and supporting complex industrial Ethernet infrastructures.
