Which quota is used for cable terminal boxes

Key Takeaways

Cable terminal boxes are subject to EU tariff quotas based on their classification in the Combined Nomenclature (CN), and the specific quota depends on whether they are electrical or fiber optic types.

Understanding Tariff Quotas

A tariff quota allows a limited quantity of specific goods to be imported into the EU at a reduced or zero duty rate during a defined period. These quotas are managed on a first-come, first-served basis and require proper documentation, including proof of origin for preferential quotas (EU or non-EU agreements). Once the quota is filled, additional imports are subject to standard duties.

Classification of Cable Terminal Boxes

Cable terminal boxes can be broadly categorized as: Electrical terminal boxes: Used to connect main cables to branch circuits, control systems, or sensors. They may include screw or spring terminals and are designed for indoor or outdoor use. Fiber optic terminal boxes: Enclosures for splicing, terminating, and distributing optical fibers in FTTH or MDU networks.

They are often IP65/IP68 rated for outdoor protection and vary in port capacity from 2 to 96 cores. The Combined Nomenclature (CN) code for customs purposes depends on the type of terminal box: Electrical terminal boxes typically fall under CN 8538 (parts suitable for electrical apparatus) or CN 8536 (electrical switches, boards, and enclosures for control panels). Fiber optic terminal boxes may be classified under CN 8517 (telecommunication apparatus) or related subheadings for optical fiber distribution equipment.

How to Determine the Applicable Quota

Identify the CN code for your specific terminal box type.

Consult the E

U Tariff Quota database to check if a quota exists for that CN code. Verify preferential agreements if importing from non-EU countries, as some quotas allow reduced or zero duties. Apply for an import license if required, especially for quotas managed by the European Commission.

Practical Advice

For bulk imports, ensure the CN code is correctly assigned to avoid customs delays. Check the current quota balance in the EU database to confirm availability. For fiber optic boxes, confirm whether the quota covers telecommunication equipment or if standard duties apply.

By following these steps, importers can determine the specific quota applicable to cable terminal boxes and benefit from reduced tariffs where available.

Quota for optical fiber terminal box sleeve

A fiber terminal box is a protective enclosure designed to safeguard fiber optic cables and the fiber pigtails that are spliced or connected at the termination point of the fiber optic cable.

They are used as a link between the main cable to the control room and the branch cables into the field. In addition to this, they may also be used for the direct connection of actuators and sensors.

Cable entries

The cable entry consists of a threaded metal sleeve, in which a sheathed cable is anchored and encapsulated. The individual cores are then connected directly inside the flameproof enclosure.

Autonomous tariff suspensions and quotas

Autonomous tariff suspensions and quotas are a total or partial waiver of the applicable import customs duties. Its aim is to promote Europe''s prosperity and help its economy be competitive and sustainable.

101 Guidelines for Fiber Termination Box

An ordinary termination box is composed of three parts: housing, internal components and fiber connector protection element. The internal is encapsulated in an IP-rated housing made of

The optical fiber terminal box is the terminal joint of an optical cable, one end of which is an optical cable, and the other end is a pigtail, which is equivalent to a device that splits an optical cable

What quota should be used for sealing fiber distribution boxes

The distribution cable has a weatherproof termination box near the home and the prefabricated drop cable plugs into that box on one end and on another panel at the home, so no termination is required.

High-Quality Fiber Optic Terminal Boxes
