Which switch can achieve full port aggregation

Overview

All UniFi Switches support aggregation, except USW-Flex, USW-Flex-Mini and USW-Ultra. Port aggregation allows you to group multiple physical ports into one unit. It is commonly used to increase bandwidth, improve network performance, and provide redundancy in case of link failure. Implementation may follow vendor-independent standards such as Link Aggregation Control Protocol. The Enterprise Campus Aggregation is a high-capacity 100G switch that extends redundancy to the core of your network.
